What is a pregnancy registry?

A pregnancy registry is a study that collects health information from women who take prescription medicines when they are pregnant. Information is also collected on the newborn baby.

What is the purpose of the Teva Migraine Pregnancy Registry?

This study will help doctors learn more about the effect of different migraine medicines on pregnancy and babies. These learnings will help other pregnant women like yourself who suffer from migraine.

Who can take part in the Teva Migraine Pregnancy Registry?

If you are a pregnant woman between the ages of 18 and 45 and have taken a migraine medication during pregnancy, you may be eligible to take part in the registry and help us in this important research.

What can I expect if I decide to participate?

If you agree to participate, there are no additional healthcare provider visits, testing, or treatments beyond the regular medical care you receive from your healthcare providers.

With your consent, we will contact either you, your healthcare provider(s), or your baby's healthcare provider(s) to obtain information at various times about you, your pregnancy, and your baby through their first year of life.

This information will be collected through telephone interviews, online questionnaires, and/or paper-based forms.

There are no costs to take part in this pregnancy registry. Registry participants may be eligible for compensation for completing activities throughout registry participation.
